

BGP Large Communities for IXPs

Greg Hankins

greg.hankins@nokia.com

Nokia

IXP Members Use BGP Communities

- [RFC 1997](#) style communities have been available for the past 20 years
 - Encodes a 32-bit value displayed as: “16-bit ASN:16-bit value”
 - Designed to simplify Internet routing policies
 - Signals routing information between networks so that an action can be taken
- Broad support in BGP implementations
- Widely deployed and required by members for Internet routing

Community	Description
0:peer-as	Prevent announcement of a prefix to a peer
43760:peer-as	Announce a route to a certain peer
0:43760	Prevent announcement of a prefix to all peers
43760:43760	Announce a route to all peers

INEX RFC 1997 Communities Examples

Needed RFC 1997 Style Communities, but Larger

- We knew we'd run out of 16-bit ASNs eventually and came up with 32-bit ASNs
 - RIRs started allocating 32-bit ASNs by request in 2007, no distinction between 16-bit and 32-bit ASNs now
- However, you can't fit a 32-bit value into a 16-bit field
 - Can't use native 32-bit ASNs with RFC 1997 communities
- Needed an Internet routing communities solution for 32-bit ASNs for almost 10 years
 - Parity and fairness so everyone can use their globally unique ASN

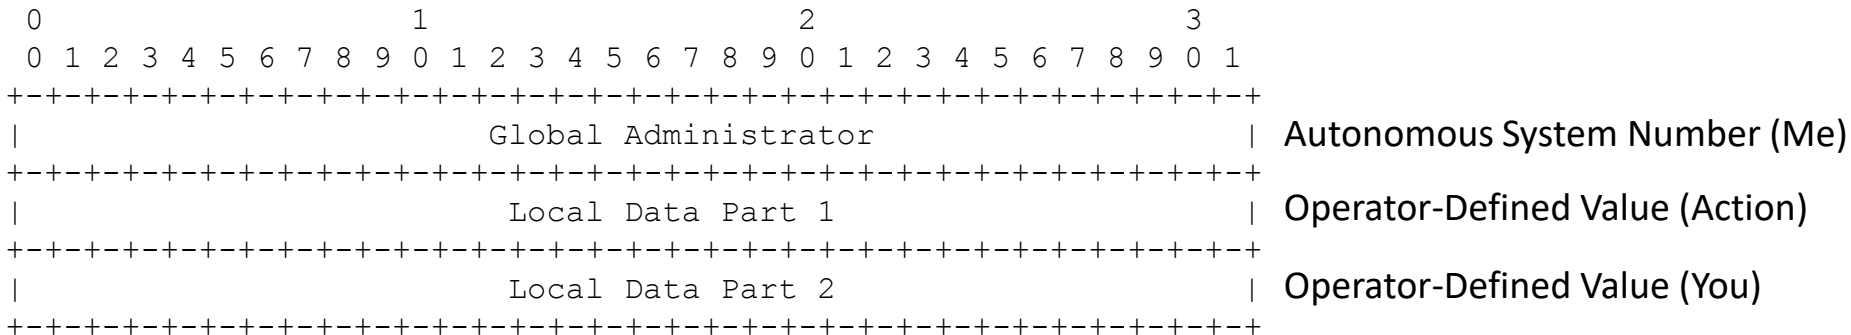

The Solution: [RFC 8092](#)

“BGP Large Communities Attribute”

- Idea progressed rapidly from inception in March 2016
- First I-D in September 2016 to RFC publication on February 16, 2017 in just seven months
- Final standard, plus a number of implementation and tools developed as well
- IXPs and their members can test and deploy the new technology now

Encoding and Usage

- A unique namespace for all 16-bit and 32-bit ASNs
 - No namespace collisions between ASNs
- Large communities are encoded as a 96-bit quantity and displayed as “32-bit ASN:32-bit value:32-bit value”
- Canonical representation is \$Me:\$Action:\$You

Demand for BGP Large Communities at CIX

- CIX 2016 members survey
- 18/31 members responded
- “When do you plan to support BGP large communities?”
- Results show existing use and near-term demand

Planning for Large Communities

- The entire network ecosystem needs to support large communities in order to provision, deploy and troubleshoot them
- Ask your vendors and implementers for software support
- Update your tools and provisioning software
- Extend your routing policies, and openly publish this information
- Train your technical staff

“All i want for christmas is ... Large BGP Communities” by Fredrik "Hugge" Korsbäck

2017-04-11

30th Euro-IX Forum, Barcelona

Develop a Comprehensive Communities Policy

- Classic RFC 1997 communities will continue to be used together with large communities
 - There's no flag day to convert, large communities simply provide an additional way to signal information
- Your existing routing policy with classic communities is still valid
- Well-known communities such as “no-advertise”, “no-export”, “blackhole”, etc. are still used
- Extend your policy with large communities that allow members to signal the same information as they can with classic communities

Communities Policy Development

- [draft-ietf-grow-large-communities-usage](#) is a new [RFC 1998](#) style I-D in the IETF GROW Working Group
- Provides examples and inspiration for network operators to use large communities
- Also provides many examples on how to develop a communities policy
 - Informational communities
 - Action communities

Informational Communities

- An informational label to mark a route with
 - Its origin: ISO 3166-1 numeric country ID and UTM M.49 geographic region
 - Relation or propagation: internal, member, peer, transit
- Provides information for debugging or capacity planning
- The Global Administrator field is set to the ASN that labels the routes
- Most useful for downstream networks and the Global Administrator itself

Information Communities Example

ISO 3166-1 Country ID		+	UN M.49 Region		+	Relation	
Large Community	Description		Large Community	Description		Large Community	Description
64497:1:528	Netherlands		64497:2:2	Africa		64497:3:1	Internal
64497:1:392	Japan		64497:2:9	Oceania		64497:3:2	Member
64497:1:840	USA		64497:2:145	Western Asia		64497:3:3	Peering
			64497:2:150	Europe		64497:3:4	Transit

- For example, a communities value of “64497:1:528 64497:2:150 64497:3:2” would indicate that it was learned in the Netherlands, in Europe, from a member

CDN / Eyeball Example – You do a lot with 32 bits!

British Postal Codes (~31 Bits)		or	GPS Coordinates	
Large Community	Postal Code		Large Community	Location
64497:9:849701135	E1W 1LB (London)		64497:10:1281024	Amsterdam
64497:9:1345374681	M90 1QX (Manchester)			(52.37783, 4.87995)

- Location encoding can be used to provide very accurate location information attached to more-specific routes announced to CDN caches
- British postal codes can be encoded by stripping the whitespace and doing a simple base36 to base10 conversion
- GPS coordinates can be encoded with Geohash
 - For example 52.37783, 4.87995 (Amsterdam) encoded with 600 meter precision
 - Python: `import Geohash; Geohash.encode(52.37783, 4.87995, precision=6)`
 - Geohash result: “u173zp”
 - Convert “u173zp” from base32 to base10 = 1281024

Action Communities

- An action label to request that a route be treated in a particular way within an AS
 - Propagation characteristics: export, selective export, no export
 - Local preference: influence ingress traffic within the AS
 - AS Path: influence traffic from outside the AS
- The Global Administrator field is set to the ASN which has defined the functionality of the community
 - Also is the AS that is expected to perform the action
- Most useful for transit providers taking action on behalf of a member or the Global Administrator

Action Communities Example

- Selective no export
 - ASN based selective no export
 - Location based selective no export
- Selective AS path prepending
 - ASN based selective AS path prepending
 - Location based selective AS path
- Blackhole
 - Local blackhole
 - Remote blackhole

ASN Based No Export	
Large Community	Description
64497:4:64498	AS 64498
64497:4:64499	AS 64499
64497:4:65551	AS 65551

Location Based No Export	
Large Community	Description
64497:5:528	Netherlands
64497:5:392	Japan
64497:5:840	USA

Getting Started With Large Communities

- 2018 is the year of large BGP communities
 - Preparation, testing, training and deployment can take some time
 - Start the work now, so you are ready when members want to use large communities
- Lots of resources are available to help IXPs learn about large communities
 - BGP speaker implementations
 - Analysis and ecosystem tools
 - Presentations (<http://largebgpcommunities.net/talks/>)
 - Documentation for each implementation
 - Configuration examples (<http://largebgpcommunities.net/examples/>)

Large Communities Beacon Prefixes

- The following prefixes are announced with AS path 2914_15562\$
 - 192.147.168.0/24 ([looking glass](#))
 - 2001:67c:208c::/48 ([looking glass](#))
 - BGP Large Community: 15562:1:1

Cisco IOS Output (Without Large Communities Support)

```
route-views>show ip bgp 192.147.168.0
BGP routing table entry for 192.147.168.0/24, version 98399100
Paths: (39 available, best #30, table default)
  Not advertised to any peer
  Refresh Epoch 1
  701 2914 15562
    137.39.3.55 from 137.39.3.55 (137.39.3.55)
      Origin IGP, localpref 100, valid, external
      unknown transitive attribute: flag 0xE0 type 0x20 length 0xC
      value 0000 3CCA 0000 0001 0000 0001
      rx pathid: 0, tx pathid: 0
```

BIRD Output (With Large Communities Support)

```
COLOCLUE1 11:06:17 from 94.142.247.3] (100/-) [AS15562i]
Type: BGP unicast univ
BGP.origin: IGP
BGP.as_path: 8283 2914 15562
BGP.next_hop: 94.142.247.3
BGP.med: 0
BGP.local_pref: 100
BGP.community: (2914,410) (2914,1206) (2914,2203) (8283,1)
BGP.large_community: (15562, 1, 1)
```

BGP Speaker Implementation Status

Implementation	Software	Status	Details
Arista	EOS	Planned	Feature Requested BUG169446
Cisco	IOS XR	✓ Done!	Beta (perhaps in 6.3.2 for real?)
cz.nic	BIRD	✓ Done!	BIRD 1.6.3 (commit)
ExaBGP	ExaBGP	✓ Done!	PR482
FreeRangeRouting	frr	✓ Done!	Issue 46 (commit)
Juniper	Junos OS	Planned	Second Half 2017 (perhaps 17.3R1?)
MikroTik	RouterOS	Won't Implement Until RFC	Feature Requested 2016090522001073
Nokia	SR OS	Planned	Third Quarter 2017
nop.hu	freeRouter	✓ Done!	
OpenBSD	OpenBGPD	✓ Done!	OpenBSD 6.1 (commit)
OSRG	GoBGP	✓ Done!	PR1094
rtbrick	Fullstack	✓ Done!	FullStack 17.1
Quagga	Quagga	✓ Done!	Quagga 1.2.0 875
Ubiquiti	EdgeOS	Planned	Internal Enhancement Requested
VyOS	VyOS	Requested	Feature Requested T143

**Route
Servers
are Done!**

Tools and Ecosystem Implementation Status

Implementation	Software	Status	Details
DE-CIX	pbgpp	✓ Done!	PR16
FreeBSD	tcpdump	✓ Done!	PR213423
Marco d'Itri	zebra-dump-parser	✓ Done!	PR3
OpenBSD	tcpdump	✓ Done!	OpenBSD 6.1 (patch)
pmacct.net	pmacct	✓ Done!	PR61
RIPE NCC	bgpdump	✓ Done!	Issue 41 (commit)
tcpdump.org	tcpdump	✓ Done!	PR543 (commit)
Yoshiyuki Yamauchi	mrtparse	✓ Done!	PR13
Wireshark	Dissector	✓ Done!	18172 (patch)

Visit <http://largebgpcommunities.net/implementations/> for the Latest Status

Testing Large Communities

- The BGP Large Communities Playground provides an easy way run several implementations together in a lab environment
- Supports BIRD, ExaBGP, GoBGP, Quagga and pmacct
- Docker images are available
- Use the playground to
 - Become familiar with large communities
 - Test interoperability with your vendor's BGP implementations
 - Design, configure and verify your new community policies

Configuration and Output Examples

BIRD Configuration

```
# match
```

```
if ((8283, 1, 2) ~ bgp_large_community) then return true;
```

```
# scrub / delete
```

```
bgp_large_community.delete([(8283, *, *)]);
```

```
bgp_large_community.delete([(8283, 0, 1)]);
```

```
# set
```

```
bgp_large_community.add((8283, 0, 100));
```

```
bgp_large_community.add([(8283, 0, 100), (8283, 2, 333)]);
```

IOS XR Configuration (EFT – Beta “Just Like Community”)

```
# match  
route-policy set-something  
  if large-community matches-any (8283:4:3) then  
    set local-preference 120  
  endif  
end-policy
```

```
# scrub / delete  
route-policy set-something  
  delete large-community in (8283:*:*)  
  delete large-community in (8283:4:3)  
end-policy
```

```
# set  
route-policy set-something  
  set large-community (8283:45:29) additive  
end-policy
```

Nokia SR OS Configuration

```
policy-options
  community "set" members "8283:45:29"
  community "match" members "8283:4:3"
  community "delete" members "8283:4:3"
```

```
policy-statement "set-something"
  entry 10
    description "match"
    from
      community "match"
    exit
    action accept
      local-preference 120
    exit
  exit
  entry 20
    description "scrub / delete"
    action accept
      community remove "delete"
    exit
  exit
  entry 30
    description "set"
    action accept
      community add "set"
    exit
  exit
exit
```

OpenBGPD Configuration

match

```
allow from any large-community 8283:1:2
match from any large-community 8283:1:2 set localpref 300
deny to any peer-as neighbor-as \
    large-community 8283:6:neighbor-as
```

scrub / delete

```
match from any set { large-community delete 8283:*:* }
match from any set { large-community delete 8283:1:2 }
```

set

```
match from any set { large-community 8283:1:2 }
match from any set { large-community 8283:1:2 \
    large-community 8283:4034:24824 }
```

tcpdump 4.9.0 Packet Capture
